A better AI Driven by Blockchain and Big Data

**Issue**

Original business scenario:

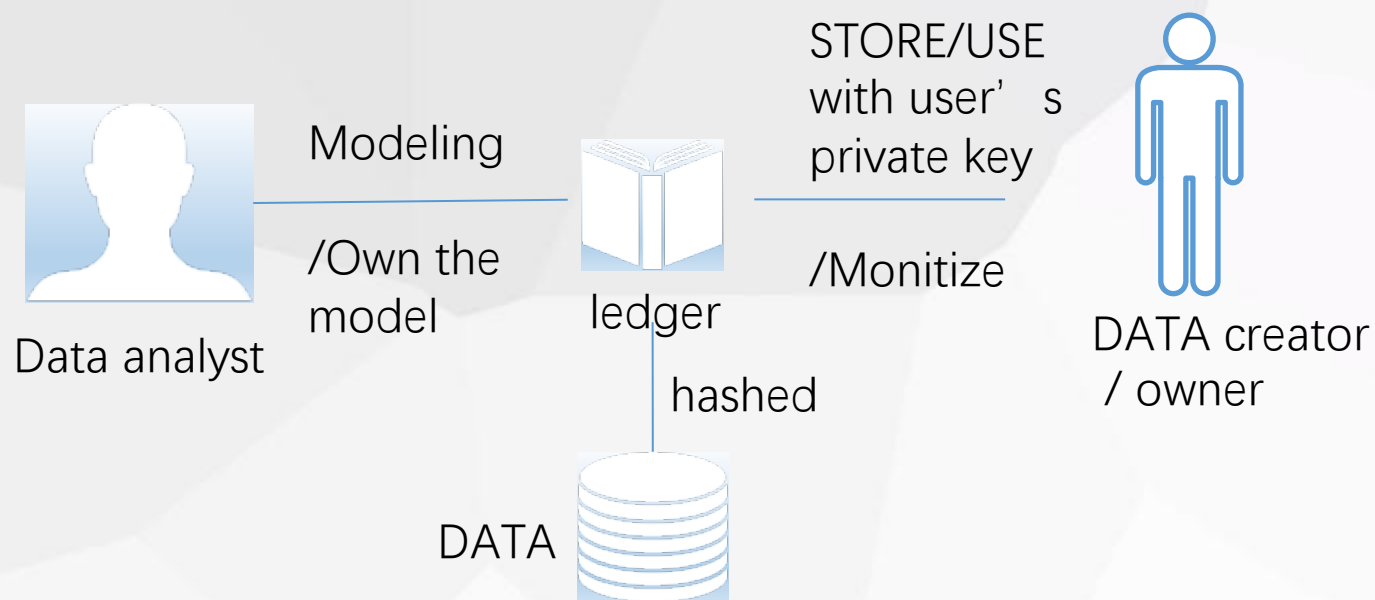

## With blockchain...

New business scenario:

## A better AI

- Users pay app providers to get quality service
- Data belongs to users, identified by private key
- Data analyst pay the data owner/users, get the data to train the model
- App providers pay data analyst, use the model to better serve the users.
- Everyone play its role and benefits from the ecosystem, to build a better AI.
- This is based on blockchain, so we can trust the people we never met before.
